

INSTALLING FORTISBLUE 6.11 SERVICE PACK 1

FortisBlue 6.11 Service Pack 1 is required to get the new DocuWare Migration Helper. The new Migration Helper provides additional flexibility for mapping FortisBlue Databases and Document Types to DocuWare File Cabinets.

To install the Service Pack, do the following:

Download the file **FortisBlue_6.11_SP1.zip** from http://cdn.westbrooktech.com/fortisblue611/FortisBlue_6.11_SP1.zip. Extract the zip file to the desired location in the file system.

On the FortisBlue server

1. Navigate to **:\Program Files (x86)\Westbrook Technologies Inc\FortisBlue\WTI.FortisBlue.Services\bin**
2. Rename **OAL.API.dll** to **OAL.API.dll.Backup**
3. Copy **OAL.API.dll** from the location of the extracted zip file to **:\Program Files (x86)\Westbrook Technologies Inc\FortisBlue\WTI.FortisBlue.Services\bin**
4. Reset IIS.

On the Workstation(s) to perform migrations

1. In the location of the extracted zip file, right click on **DocuWare.FortisMigration.msi** and run as administrator.
2. The directory **C:\Program Files (x86)\DocuWare\Fortis Migration** will be installed.
3. In that directory is **DocuWare.FortisFileCabinetMigration.exe**, launching this file starts the DocuWare Migration Helper which allows you to set-up a DocuWare system based on your FortisBlue installation.
